

## AUTOMOTIVE ELECTRICAL SYSTEM TRAINING MODEL NO – SL-21, MAKE – LABTEK, ORIGIN – INDIA

The Electrical Practical Training Board System should be designed to realistically simulate the electrical system on an auto mobile. The unit should consist of a number of modular demonstration panels, which should be mounted on a wheeled stand with special powder coated aluminum rails, for Plexiglas panels, which gives secure and firm fitting modules. Also should contain a power source and component connecting cables. The components featured should be real original parts as commonly used in automobile typically produced by the major car or component manufacturers.
